ABASS DURODOLA

Address: Ontario, Canada | +1(416)834-8057 | abassdurodola07@gmail.com | **GitHub:** https://www.github.com/gbolahan7 | **https://www.linkedin.com/in/abass-durodola017/**

Professional Summary

Software Development Engineer in Test & QA Engineer with a strong software development background, experienced in building and validating backend, API-driven, and mobile applications across fintech, banking and digital platforms. Skilled in designing automated and manual test strategies, API and integration testing, UI/E2E and mobile testing, test automation, and CI/CD pipelines to improve system reliability and release confidence.

Technical Skills

- **Programming & Scripting*:*** Python, JavaScript, PHP, node.js, Java
- **Databases*:*** Hands-on experience with MySQL, SQL Server, MongoDB, and PostgreSQL.
- **Test Automation*:*** Selenium, Appium, Playwright, Postman, Pytest, Cypress, Junit.
- **Testing:** API Testing, AI-assisted test design, Regression Testing, test automation, manual testing, load testing,
- **Tools & Practices:** Agile/Scrum, Git, Jira, defect management, test case design
- Experienced with CI/CD, Docker, AWS EC2, Sentry

Education

COMPUTER SCIENCE | MSc.
Teesside University

MIDDLESBROUGH, UNITED KINGDOM.

COMPUTER ENGINEERING | BSc.
Obafemi Awolowo University

OSUN STATE, NIGERIA.

Work experience

Software QA Engineer
SPACEOPS INC.

12/2025 – PRESENT ONTARIO, CANADA

- Led parity QA for the CORE payments system from EC2 → Kubernetes migration across 4 environments; built multi-tier automated load harnesses (up to 250×50 concurrent) across 6 payment methods producing accumulating excel dashboards for stakeholders.
- Designed and executed comprehensive test plans, test cases, and end-to-end validation for the One-Click Checkout (OCC) platform, covering payment authorization, checkout, settlement, and payout workflows used by enterprise merchants.
- Implemented automated smoke and regression test suites using Playwright + python, reducing post-deployment verification time by ~50% and improving release confidence.
- Leveraged AI-assisted tools (Cursor, Claude) to accelerate test case design, automation development, and debugging workflows.
- Performed functional and exploratory testing across web and mobile workflows validating user journeys, API interactions, device specific behaviors, and edge cases.
- Executed end-to-end API and database validation using Postman and SQL to verify backend integrations.

Software Developer in Test - Contract
DOH CONSULTING INC.

10/2025 – 12/2025 ONTARIO, CANADA

- Designed and implemented testable APIs using Java Spring Boot and MySQL for scalable backend systems.
- Developed RESTful APIs for user management, authentication, and session tracking with automated unit and integration tests using JUnit.
- Performed API performance and load validation to identify stability and scalability risks, providing recommendations to improve response time and system reliability.
- Created detailed test plans, reusable test cases, and API validation scenarios covering functional, integration, and regression testing for backend services.

Analyst (Innovation)
VIRGIN MONEY

06/2024 – 10/2025 NEWCASTLE, UNITED KINGDOM

- Designed automated validation scripts to verify credit decisioning logic, ensuring accuracy and consistency across high-volume financial datasets.
- Engineered an internal automation tool using Python and Selenium for mortgage affordability checks, reducing manual validation effort by over 70% and improving process accuracy.
- Integrated Python with SAS to build and enable dynamic data visualization (using Plotly, Matplotlib) and enhancing real-time test result analysis.
- Built Selenium automation to reduce repetitive validation tasks while improving test coverage and operational efficiency.

Software Developer (SDET) - Remote
INNIXX

08/2023 – 04/2024 LAGOS, NIGERIA

- Developed Selenium-based automated test suites for high-volume payment workflows, improving regression coverage and reducing manual testing effort.
- Designed and maintained API, integration, and regression test suites for backend services, validating service interactions, business logic, and error handling.
- Integrated automated test execution into CI/CD pipelines, enabling continuous validation of node.js and java services using Junit and Jest.
- Optimized SQL and NoSQL queries across PostgreSQL and MongoDB, achieving over 25% improvement in throughput through indexing and profiling

Software Developer
SOFTALLIANCE

03/2020 – 08/2021 LAGOS, NIGERIA

- Designed and implemented a modular reporting microservice for ANPR system, reducing reporting inconsistencies by 30% and improving maintainability.
- Developed and executed unit, integration, and regression tests across PHP (Laravel) and JS codebases
- Backend Development: Integrated 3rd-party APIs/libraries (JavaScript/Laravel) for biometric solutions.
- Improved core functionalities across billing system and payment platform like SoftPay, enhancing transaction reliability and user experience.
